e-Health IT

Chronic diseases such as heart disease, stroke, cancer, chronic respiratory conditions and diabetes affect almost one in three people worldwide. These diseases threaten the sustainability of health care as we know it.

The solution to this problem requires new models of collaborative care, involving planned and continuous management by a team of care providers and the patient themselves. However, there is currently a huge gap in our ability to deliver this kind of care. To meet this challenge, Precedence Health Care has developed cdmNet, a clinically proven software network to support primary care professionals and patients throughout the entire care management process.

cdmNet is a Chronic Disease Management service provided over the Internet for primary care professionals and their patients. It automates the entire care management process, from the creation of individualised care plans to review and follow up, continuously tracking the care of the patient in real time across the whole care team.

cdmNet improves the quality and safety of care, reduces the time spent on administration, eliminates the paperwork associated with care planning, and optimises collaboration among the care team and the patient.

Products and/or Services:

Web-based services for assisting health care professionals and patients manage chronic disease.

Application Areas:

Disease Management (DM), Care Management, Collaborative Care, Primary Care

Target Markets:

Australia, Taiwan, China, South-East Asia, US, UK, Europe, Middle East

Date business commenced: 1997
